

OPPORTUNITIES FROM CHINA'S ACCESSION TO THE WTO

North Dakota

The U.S.-China Bilateral Agreement on China's accession to the WTO opens an important market to North Dakota's exports, benefitting key industries and creating export and employment opportunities. The importance of exports to China and the benefits of the Agreement for North Dakota and its key industries are outlined below.

State Export Profile

North Dakota's exports to China between 1993 and 1998 surged by 568 percent from \$658 thousand to \$4.4 million.

As a result of the large increase in North Dakota's exports to China, China ranked as North Dakota's 12th largest export destination in 1998, up seven places from the 19th position in 1993.

North Dakota's exports to China are becoming more diversified with 1998 exports to China, encompassing 12 product groups, whereas North Dakota's 1993 exports were from just one product group.

The Fargo-Moorhead, ND-MN, metro area recorded 1998 export sales to China of just over \$1 million—nearly double the amount exported to China in 1997 and up from zero sales in 1993.

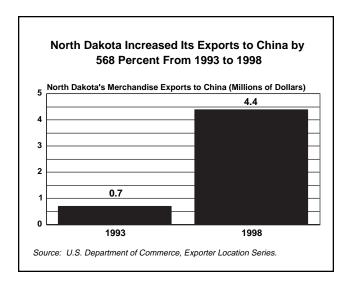

- Tariff elimination for information technology products. Major tariff reductions for construction equipment, including heavy machinery, and agricultural equipment.
- Elimination of import restrictions for products such as construction equipment and information technology products.

The agreement will open the market for a wide range of services, including telecommunications, banking, insurance, financial, professional, hotel, restaurant, tourism, motion pictures, video distribution, software entertainment distribution, periodicals distribution, business, computer, environmental, and distribution and related services.

Sector Snapshot

U.S. farmers no longer will have to compete with export subsidies on China's agricultural products. China has agreed also to eliminate sanitary and phytosanitary barriers that are not based on sound scientific evidence, such as the restrictions on imports of meat, poultry, and wheat. In addition, exporters will benefit from broadening the right to import and distribute imported products in China and from tariff cuts on a wide range of products including sunflower seed oil. Also, China will end its import monopoly for bulk commodities and establish large low-duty tariff-rate quotas for wheat and soybean oil. Soybean oil will be totally removed from state trading in six years.

As a result of the Agreement, North Dakota's key export sectors benefit from reduced tariffs in China, strong intellectual property protection and improved trade rules protecting U.S. industries against unfair trade practices and removing burdensome obstacles, including:

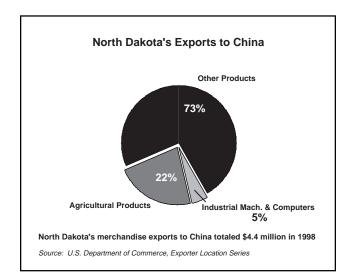

Key Industry Benefits

Information Technology

China will eliminate its duties for all information technology products, as defined by the WTO Information Technology Agreement (ITA), by January 1, 2005. These products include electronics, computers, fiber optic cable, and other telecommunications equipment. The current duties on information technology products average over 13 percent. All quotas on ITA products will be eliminated at the time of China's WTO accession. Within four years of its accession into the WTO, China will eliminate its tendering requirements for nongovernment purchases of ITA products. Trading and distribution rights for ITA products will be phased in over three years. China has agreed to apply tariffs uniformly and all taxes equally to domestic and foreign ITA businesses. This will alleviate the uncertainty associated with China's inconsistent application, refund, and waivers of its 17 percent value added tax. China has agreed that it will not condition import or investment approvals on technology transfer, or on conducting research and development in China.

Agriculture Equipment

China will reduce the average tariff on agriculture equipment from 11.5 percent to 5.7 percent, and the tariffs on high priority products to 3 percent and 4 percent by January 1, 2002. Trading and distribution rights for agriculture equipment will be phased in over three years, while tendering requirements for nongovernment purchases will be eliminated within one year of its accession into the WTO. China will not apply or enforce export performance or local content requirements as a condition for importation or investment approval. China has agreed to apply tariffs uniformly and all taxes equally to domestic and foreign agriculture equipment businesses. This will alleviate the uncertainty associated with China's inconsistent application, refund, and waivers of its 17 percent value added tax.

Construction Equipment

China will reduce average tariffs on construction equipment by more than half to an average rate of 6.3 percent by January 1, 2004. Within four years of its accession to the WTO, China will eliminate its tendering requirements for non-government purchases of construction equipment. Trading and distribution rights for construction equipment will be phased in over a three year period. China will not apply or enforce export performance or local content requirements as a condition for importation or investment approval. China has agreed to apply tariffs uniformly and all taxes equally to domestic and foreign construction equipment businesses. This will alleviate the uncertainty associated with China's inconsistent application, refund, and waivers of its 17 percent value added tax.

Soybeans and Products

China is the world's largest growth market for soybeans and products, and has taken important steps under its WTO accession agreement to open its market to these products. Tariffs will be bound at a low 3 percent on soybeans and 5 percent on soybean meal with no quota limits. For soybean oil, the tariff will drop to 9 percent, and the tariff-rate quota and state trading will be eliminated by 2006.

Barley and Products

China is one of the world's largest importers of barley. Its grain policies are becoming more market-oriented and its WTO accession commitments will speed up this process, opening up real long-term opportunities for foreign grain suppliers. Under its WTO accession agreement, China will remove the existing quota on barley, and replace it with a 9 percent tariff. In addition, the tariff on barley malt will drop from 30 percent to 10 percent.

Beef

China currently imports very little beef, but income growth and rising demand from urban centers are expected to result in significantly increased demand for imports. Under its WTO accession agreement, China will lower its tariff from 45 percent to 12 percent on frozen beef and from 45 percent to 25 percent on chilled beef by 2004. Tariffs on variety meats will be lowered from 20 percent to 12 percent. There will be no quantity limits at these tariff levels. As a result of the 1999 U.S.-China Agreement on Agricultural Cooperation, China agreed to accept all beef from the United States that is accompanied by a USDA certificate of wholesomeness.

Oilseeds and Products

China is the world's largest growth market for oilseeds and products and has taken important steps

unde its WTO accession ag eement to open its ma ket to these products. Tariffs will be bound at a low 3 percent on soybeans and 5 percent on soybean meal with no quota limits. For vegetable oils such as sunflower oil, China will immediately eliminate quotas and replace them with a 10 percent tariff.

Wheat and Products

China's grain policies are becoming more market-oriented and its WTO accession commitments will speed up this process, opening up real long-term opportunities for foreign suppliers. China committed to a nominal 1 percent tariff on all grains imported within a tariff-rate quota (TRQ). The TRQ on wheat will be initially set at 7.3 million metric tons and grow to 9.6 million metric tons by 2004. As a result of the 1999 U.S.-China Agreement on Agricultural Cooperation, China also agreed to import wheat and other grains from the United States. In calendar year 1999, China imported 448,000 metric tons of wheat from all countries.

Trade Stories

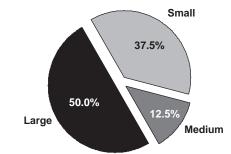

Bobcat/Ingersoll Rand (Fargo) is North Dakota's largest manufacturer. The company employs some 2,400 people worldwide and 1,800 people in North Dakota. It produces compact equipment for the construction, industrial, and farm markets at two plants in Bismarck and Gwinner. Its headquarters are in Fargo. The Bismarck plant produces loaders, excavators, and attachments. The Gwinner plant produces skid-steer loaders and attachments. Bobcat/Ingersoll Rand sells to ship trimming, road and highway repairing, and agriculture businesses in China. It has been exporting to China for 20 years. Some problems it currently faces while doing business in China include high tariffs, purchasing decisions based on noncommercial terms imposed by state-owned enterprises, the inability to warehouse products satisfactorily, and the inability to operate the distribution of its product in China. However, under the WTO agreement, China will address all of these problems by its commitments to lower tariffs on these products, allow distribution, and require its state-owned enterprises to make purchasing decisions on a commercial basis.

ROLE OF SMES IN EXPORTS TO CHINA

Small and medium-sized enterprises (SMEs) are responsible for a growing share of U.S. exports to China.

- In 1997, SMEs generated 35 percent—more than onethird—of all U.S. merchandise exports to China. This figure is up significantly from a 28 percent share in 1992.
- The 35 percent SME share of the China market in 1997 was higher than the SME share of overall U.S. merchandise exports (31 percent) in that year.
- Half of all firms exporting from North Dakota to China in 1997 were small or medium-sized enterprises (fewer than 500 employees).

Small & Medium-Sized Companies Account for 50 Percent Of All Firms Exporting From North Dakota to China

8 companies exported merchandise from North Dakota to China in 1997

Definitions: small = fewer than 100 employees; medium = 100–499 employees; large = 500 or more employees. Source: 1997 Exporter Data Base, U.S. Department of Commerce.

Overview of China WTO Accession Benefits to the United States

The Agreement is a one-way deal that will open China's now largely closed market to U.S. exports. By enacting Permanent Normal Trade Relations (PNTR), the United States is merely maintaining the market access policies it already applies to China. If Congress enacts PNTR, the agreement is expected to provide a substantial boost for U.S. exports. If Congress fails to pass PNTR, American companies, workers and farmers will be denied the great bulk of benefits of the agreement the United States already negotiated—including broad new market access for critical services such as telecommunications and distribution, strong import protections, and the right to enforce China's commitments through WTO dispute settlement. Failure to enact PNTR means fewer U.S. exports to China. U.S. competitors in Europe, Asia and elsewhere will gain market share at the expense of U.S. exporters as these countries will enjoy the full benefits of China's market opening WTO commitments.

Deep cuts for tariffs in manufactured products sectors¹ affecting most U.S. exports—averaging an across-the-board 60 percent cut in tariffs for industrial products. Important gains include a 62.5 percent cut in tariffs for pulp, paper and printed material and elimination of tariffs for information technology products including electronics, telecommunications equipment, and computer equipment.

Tariff bindings for every sector. U.S. industries gain greater certainty of access with China's commitment not to raise tariffs on any products above the negotiated ceiling (bound) rates.

Huge reduction in paperwork costs—a boon to smaller exporters. Simplification, harmonization of customs procedures and licensing will slash costs of processing export orders.

Elimination of quotas and non-automatic licenses for all manufactured products by year 2005. Only a handful of quotas will remain after year 2003. While quotas are being phased out, the quota level will be higher than our current export levels and will increase by 15 percent each year until the quota is eliminated.

By joining the WTO, China is committing to establish a tariff-only import regime for **agricultural products**; all non-tariff barriers will be eliminated. Any other measure, such as inspection, testing, and domestic taxes, must be applied in a manner that is consistent with WTO rules requiring a transparent and nondiscriminatory system. All health-related restrictions must be based on sound science.

China also committed to implementing **agriculture tariff-rate quotas** (TRQs) on economic rather than political criteria. These commitments are designed to ensure a transparent and consistent system for allocating shares of the TRQ to end users and provisions to

ensure that quota-holders are not impeded in utilizing their allocations.

China has committed not to use **export subsidies** for agricultural products when it joins the WTO. This commitment is particularly useful for China's potential exports of corn, rice, and cotton, which in the past have displaced U.S. product from third-country markets.

Bilaterally, China agreed to the terms for removal of scientifically unjustified restrictions on importation of U.S. wheat and other grains, citrus and meat.

Foreign exchange balancing requirements—which link a company's level of imports to its level of exports—will be eliminated upon accession. This allows U.S. companies to make market-driven decisions about what to import and export instead of decisions driven by the Chinese government.

Local currency banking will be allowed starting with foreign clients upon accession, followed by Chinese enterprises two years after accession and Chinese individuals five years after accession. Foreign currency business will be allowed without geographic restrictions upon accession. China currently limits foreign banks to foreign currency business in selected cities.

Foreign securities firms may currently only trade in a limited number of stocks designated for foreign investors and then only via shared commissions. Upon accession, China will allow foreign firms to trade these shares with no Chinese intermediary. By three years after accession, foreign entities may establish securities joint ventures (JVs) with a minority equity share for foreign investors to underwrite all shares and corporate and government debt, and trade all these securities except those equity shares restricted to Chinese investors. Also upon accession, foreign entities may establish minority JVs to manage assets of all sorts.

Insurance licenses will be granted on a prudential basis, without numerical restrictions or discretionary economic needs tests. China currently only allows selected foreign companies (including four U.S. companies) to operate in China on a limited basis in only two cities.

Majority equity share for foreign non-life insurance entities will be permitted upon China's accession. Wholly owned subsidiaries will be allowed two years after accession. Life insurance joint ventures will be permitted at 50 percent equity share upon accession.

Easier access to and more control of distribution systems in China allowing U.S. companies to operate commission agents' services, franchising services, wholesaling, retailing and direct sales of their own products in three years post accession for almost all products.

Foreign companies will also be permitted greater control and access to other services related to distribution, including maintenance and repair, rental and leasing, advertising, technical testing and freight inspection, packaging, courier, storage and warehousing, and freight forwarding agency services.

The right to trade (import and export) will be permitted for almost all products within three years of accession. Currently, the right to trade is strictly limited; only companies that receive specific authorization or who import goods to be used in production have such rights.

Telecommunications services are currently not permitted to be supplied by foreigners in China. However, with its accession, China has agreed to allow foreign participation for both value-added and basic services. China has also agreed to undertake all the obligations contained in the WTO Reference Paper on pro-competitive regulatory principles. Telecom services which foreigners can supply under the Agreement include email, voice mail, online information and database retrieval, facsimile, paging, cellular, and internet services via any technology including satellites.

Professional service providers will now be permitted to operate in China and receive national treatment for accounting, auditing, bookkeeping, management consulting, legal, tax consulting, architectural, engineering, and computer services.

The elimination of local content requirements will result in better access for U.S. exports and eliminate unfair incentives or requirements to use domestic goods.

U.S. exports and investments will be free from government-imposed conditions such as technology transfer, research and development in China, and offsets. Upon China's accession, such conditions may only be negotiated between the parties to a contract and not imposed or enforced by the government.

U.S. companies can sell their products in China and not be forced to export a certain percentage back to the United States or elsewhere. This eliminates the non-market incentive to use China as an export platform.

State-owned and state-invested enterprises will be required to buy and sell based on commercial considerations, making the purchase process more market-driven and transparent for U.S. companies and will provide new sales opportunities to U.S. firms.

China has agreed to establish **judicial review** procedures for the prompt review of all administrative actions relating to the implementation of laws, regulations, judicial decisions and administrative rulings related to its WTO obligations. The tribunals will be independent of the agencies entrusted with administrative enforcement.

Greatly improved enforcement of China's commiments through the WTO dispute settlement process. The United States will now have allies in other WTO members to address violations of international trade norms.

Current U.S. practice of using a special, non-market economy methodology when calculating dumping margins in **antidumping investigations** involving imports from China will remain in effect for 15 years. Chinese industries will continue to have the burden of proving to the U.S. government that market economy conditions prevail in their industry to avoid application of this methodology.

China will apply its trade-related laws **uniformly** throughout all of China including land and seaports.

China will be required to apply equally the valueadded tax (currently at 17 percent for most products) to domestic goods as well as imports under the WTO **national treatment** provisions.

The United States will have access to a **product-specific safeguard mechanism** for 12 years which will allow the U.S. to address more easily any rapidly increasing Chinese imports in a targeted fashion in cases of actual or threatened market disruption to a U.S. industry.

China has agreed to incorporate into the WTO a **textile-specific safeguard** drawn from the U.S.-China Bilateral Textile Agreement.

¹For more information on tariff reductions, see tariff summary table.

ADDITIONAL INFORMATION AND ASSISTANCE

The reports for each of the 50 states are available at www.chinapntr.gov, as well as supplemental information on the benefits of China's membership in the World Trade Organization for U.S. industry and agriculture. Additional information on agricultural products is available from www.fas.usda.gov and speeches and testimony are provided on www.ustr.gov.

For counseling and assistance regarding exporting to China, call the Trade Information Center at 1-800-USA TRAD(E) or the Agriculture FAS Trade Assistance Office at 202-720-7420.

To discuss problems you are experiencing in exporting to China or a Chinese trade barrier you are encountering that is limiting your ability to export, please contact the Commerce Department's Trade Compliance Center. The fastest means to contact the Trade Compliance Center is the internet at http://www.mac.doc.gov/tcc. It can be reached also via e-mail (tcc@ita.doc.gov), fax (202-482-6097), or phone (202-482-1191).

¹Average 1997–98 applied duties for each product category. Reductions will be made from the 1997–98 base rate for each tariff line. Most cuts will be made in equal annual increments.

²Average end rate for each product category which will be attained once China phases in all duty reductions agreed bilaterally with the United States. All reductions will be completed by January 1, 2008, with 70 percent of all reductions on industrial goods achieved by 2003 and 98 percent of all industrial duty reductions by 2005. China's agreements with other countries may result in lower rates and shorter staging.

³Includes heaters, ventilators, air conditioners, washers, refrigerators, centrifuges/dryers.

⁴WTO Information Technology Agreement (ITA), implemented in July 1997.
